

Threaded inserts are used to quickly repair stripped, damaged or worn out threads with new stronger threads, or are used in original equipment to guarantee stronger thread connections. Automation inserts are easy to install and remove, without the need for special drills, taps or pre-winder tools. The 'locking keys' on threaded inserts are easily driven down into the thread of the surrounding base material – locking the insert securely in place.

P0083
Carbon Steel Insert

P0084
Stainless Steel Inserts

P0087
Solid Inserts

Key Features

- Solid, one-piece construction providing high pull-out strengths.
- Locking "keys" provide a positive mechanical lock against rotation of the insert.
- Easy installation and removal.
- Installation with standard drills and taps.
- No pre-winder tools required.
- No tangs to break off and account for in the assembly.
- For use in a wide variety of materials.
- Both metric and imperial sizes available in coarse and fine pitches.

Installation and Removal

Installation

- Select desired threaded insert, and from the product data table identify the installation drill and tap sizes (note the drill is slightly oversized deliberately).
Drill with standard tap drill as per product data table, and countersink with standard 82-100° countersink.
- Tap new threads with standard tap – as specified in product data table.
- Screw in the insert until it is 0.254 to 0.762mm (.010 to .030 inch) below the surface.
- Drive keys down with several hammer taps on the installation tool – see product data table for correct tool.
- Insert is installed.

Removal

Automation threaded inserts, if required, can be removed without damage to the parent/surrounding material, follow these steps.

- Refer to the product data table of the installed threaded insert and identify the drill size and drill depth required for removal. Drill out the material between the insert keys and the internal thread to specified depth.
- Bend the locking keys inward and break off.
- Remove the old insert using a screw extractor or similar.
- Install a replacement insert into the original tapped hole as per installation instruction above.

P0080

Material

Stainless steel (A2, AISI 304).

Technical Notes

To DIN 8140-1A

These inserts are used for the repair and reinforcement of cracked and damaged threads.

Thread inserts are oversized so that when installed they are kept in position,

by the pressure between the sides of the hole and the coils.

Threads are metric coarse threads, other pitches available on request.

Temperature range for use -160° C to +420° C and can withstand temperature surges up to +500° C.

Tips

A special tap is required to install these inserts.

The installation procedure includes the following steps:

1. Drill Hole
2. Tap with wire insert tap
3. Check hole with gauge
4. Install insert
5. Remove tang
6. Check thread ,go:no-go'.

THREAD INSERTS

Wire Thread Inserts - Screw Lock

A2 stainless

Thread Inserts

P0081

THREAD INSERTS

Material

Stainless steel (A2, AISI 304).

Technical Notes

To DIN 8140-1A

These inserts are used for the repair and reinforcement of cracked and damaged threads. Thread inserts are oversized so that when installed they are kept in position by the pressure between the sides of the hole and the coils. These „screw lock“ thread inserts (prevailing torque) are

useful in applications where there is cyclic vibration or impact. A portion of the thread in the mid area of the insert has polygonal threads and these exert radial pressure on the male thread. It is recommended to use „close fit“ thread tolerance male bolts or screws.

Threads are metric coarse threads, other pitches available on request.

Temperature range for use -160° C to +420° C and can withstand temperature

surges up to +500° C.

Tips

A special tap is required to install these inserts.

The installation procedure includes the following steps:

1. Drill Hole
2. Tap with wire insert tap
3. Check hole with gauge
4. Install insert
5. Remove tang
6. Check thread ‚go:no-go‘.

P0083.1

Material

Inserts: stainless steel (AISI 303) or equivalent. Passivated.

Keys: stainless steel (302 CRES) or equivalent. Passivated.

Technical Notes

General tolerances:

±0,25, unless specified.

Tap drill hole tolerances:

6,9 to 10,8 = +0,10/-0,025.

12,8 and over = +0,13/-0,025.

Tips

Order installation tool separately, as identified by „Inst. tool ref.“ in table.

Important Notes

Four locking keys on internal threads M 8 and over. Two locking keys on internal threads smaller than M 8.

Installation (Inst.) drill size, countersink, thread tap and thread depth as specified in table.

Removal drill size and drill depth as speci-

P0087.1

Material

Inserts: carbon steel (C1215) or equivalent. Zinc phosphate.

Keys: stainless steel (302 CRES) or equivalent. Passivated.

Technical Notes

General tolerances:

± 0,25" unless specified.

Tap drill hole tolerances:

6,9 to 10,8 = +0,10/-0,025"

12,8 and over = +0,13/-0,025"

Tips

Order installation tool separately, as identified by „Inst. tool ref.“ in table.

Important Notes

Four locking keys on external threads M12 and over. Two locking keys on external

threads smaller than M12.

Installation (Inst.) drill size, countersink, thread tap and thread depth as specified in table.

Removal drill size and drill depth as specified in table.

External metric thread allows you to machine your internal thread.

THREAD INSERTS

P0088.1

Material

Steel, blackened.

Tips

For use with metric thinwall threaded

inserts P0084.1 and P0084.2.

Select installation tool of corresponding insert internal thread d_1 and external thread d_2 . If in doubt refer to data tables of

insert where correct „Inst. tool ref.“ is stated.

Order No.	For insert of internal thread = d_1	For insert of external thread = d_2
